

Incident handler's journal

Date: 21 January 2026	Entry: 1
Description	A small U.S. health care clinic specializing in providing primary-care services experienced a security incident that disrupted their business operations.
Tool(s) used	
The 5 W's	● Who caused the incident? The incident was caused by an organized group of unethical hackers who are known to target organizations in the healthcare and transportation industries ● What happened? Employees were unable to access files and software to perform their jobs ● When did the incident occur? The incident occurred on Tuesday 09:00 ● Where did the incident happen? The incident occurred at the on-site premises of the health care clinic ● Why did the incident happen? The attackers gained access to the company's network through targeted phishing e-mails that were sent to several of the company's employees. These e-mails contained a malicious attachment that installed malware on the employee's computers once the file was downloaded. Once the attackers gained access, they deployed

	ransomware which encrypted critical files. The company was unable to access patient files as result of this attack.
Additional notes	Employees also reported seeing a ransom note that was displayed on their computers. The note stated that all of the company's files were encrypted by a group of unethical hackers and they also demanded payment in exchange for restoring access to the encrypted files. Additionally, the large sum of money was demanded in exchange for the decryption key.
