Professional Statement and Technical Skills

Durell Dunn

Aspiring Cybersecurity Analyst

Professional Portfolio

Cybersecurity Professional Statement

I am an aspiring Cybersecurity Analyst with a strong interest in protecting organizations and individuals from cyber threats. I am motivated by the opportunity to contribute to meaningful work that helps safeguard digital systems, sensitive information, and critical infrastructure in an increasingly connected world.

I bring a detail-oriented approach, strong written and verbal communication skills, and a solid foundation in computer networking and cybersecurity principles. I have experience working with technical tools including Linux, SQL, Security Information and Event Management (SIEM) platforms, network protocol analyzers such as Wireshark and tcpdump, and Python for basic automation and data analysis. These tools support my ability to monitor systems, analyze network traffic, investigate security events, and identify potential vulnerabilities within an organization's environment.

A key principle that guides my approach to cybersecurity is maintaining a strong security mindset. This involves proactively anticipating potential threats, evaluating risk, and thinking like a defender in order to identify weaknesses before they can be exploited by threat actors. By adopting a security-first approach, organizations can better detect suspicious activity, strengthen defensive controls, and reduce overall risk exposure.

My professional values center on protecting people and organizations from malicious actors while promoting the safe and responsible use of technology. I am committed to adhering to established security policies, regulatory frameworks, and industry best practices to ensure that security controls are implemented consistently and effectively.

Through my training and hands-on projects, I have developed practical experience in system monitoring, log analysis, risk assessment, and supporting incident response activities. I recognize that maintaining a strong security posture is essential for protecting the confidentiality, integrity, and availability of information systems. Organizations that prioritize cybersecurity are better equipped to defend against attacks, maintain operational continuity, and preserve the trust of their customers and stakeholders.

I am committed to continuous learning and professional growth as I develop the skills necessary to adapt to the evolving threat landscape and contribute to strengthening an organization's overall security posture.

Skills and Technical Tools

Operating Systems

- Linux (file permissions, system navigation, log review)

Programming and Query Languages

- Python (basic automation and scripting)
- SQL (querying databases and filtering data)

Security Tools

- Security Information and Event Management (SIEM) platforms
- Wireshark (network protocol analysis)
- tcpdump (packet capture and traffic inspection)

Cybersecurity Skills

- Log Analysis
- Network Traffic Monitoring
- Risk Assessment
- Incident Response Support
- Threat Detection
- Vulnerability Identification

Security Principles

- Security Mindset
- Confidentiality, Integrity, and Availability (CIA Triad)
- Security Best Practices
- Adherence to Policies and Regulatory Frameworks
